

Sparkling Blue

Modeled after the vintage Marshall Guv'nor this pedal has been upgraded slightly to give you better tone and that notorious Marshall in a box sound. We've modified the circuit a bit to squeeze every ounce of tone out of it possible.

Layout and overview of the Sparkling Blue

Level: Controls the output level of the pedal.

Treble: Controls the high frequencies of the pedal.

Mids: Controls the mid-range frequencies of the pedal.

Bass: Controls the lower frequencies of the pedal.

Gain: controls the amount of breakup or overdrive/distortion of the pedal.

Clip: Allows the user to choose between stock diode clipping of the pedal or LED clipping altering the tone of the gain.

On/Off: Located at the lower right of the pedal.

DC Power Jack: The pedal operates on a 2.1mm center negative regulated power supply at 9 volts DC. Do not try to power your pedal at a higher voltage.

Input/Output Jacks: The input is located on the right when looking down on the pedal and the output is located at the left.
